

## CROMALIT 150

CROMALIT 150 is a concentrated Potash Chrome Alum in powder form, which contains 50% more  $\text{Cr}_2\text{O}_3$  than the standard Potash Chrome Alum crystals.

CROMALIT 150 has been specially produced and basified for direct use in the tanning drum, thereby saving the control, chemicals and labour involved in preparing a basified solution after dissolving the Potash Chrome Alum crystals.

CROMALIT 150 is specially suitable for chrome tanning of suede and for chrome retanning of splits etc. Much tighter leathers can be obtained than when using normal chrome tanning products.

### SPECIFICATION:

Appearance	:	Fine Spray Dried Powder
Colour	:	Green
$\text{Cr}_2\text{O}_3$ Content	:	22.0 - 23.0 %
Basicity	:	30 - 32 %
pH (1:10, at 20°C)	:	2.5 - 2.7
Solubility at 20°C	:	Totally in 4 minutes

**Packages** : Polypropylene / Polythene bags containing 25 kg nett.  
Polythene-wrapped Pallets containing 1,000 kg nett.
